

## Quantum™ 3 Inch Tablets

Quantum™ 3 Inch Tablets are slow-dissolving tablets that offer 89% available chlorine for effective sanitizing.

### Features:

- Ideal for use with floaters, feeders or skimmers
- Stabilized to help prevent UV degradation from sunlight
- Slow-dissolving

### Applications:

#### For Daily Chlorination:

1. Adjust the pool water pH value between 7.2 - 7.8 as determined by a suitable test kit. Further adjust your total alkalinity to a minimum of 100 ppm.

2. Stabilize pool water with 30 ppm **Quantum™ Stabilizer** as directed on the product label. Thereafter, regular use of **Quantum™ 3 Inch Tablets** for daily chlorination will provide any needed makeup stabilizer.

3. Superchlorinate (shock treat) your pool water to a 4 ppm residual chlorine.

4. Once your pool has been made ready following 1, 2 and 3 above, use the **Quantum™ 3 Inch Tablets** to maintain the free residual chlorine at a safe and efficient 1.0 - 1.5 ppm of free available chlorine at all times, as determined by the daily use of a suitable test kit.

5. By means of a feeder, floater or skimmer dispenser, immerse one **Quantum™ 3 Inch Tablet** (or as many as may be required to continuously maintain the safe free available chlorine level) for each 5,000 - 10,000 gals. of pool water.

Note: Never add these tablets directly into the swimming pool as discoloration of the pool liner or finish may occur.

#### Superchlorinate:

Shock treat your pool at least twice monthly (more often in sunbelt regions) during hot weather and peak bather loads. Failure to superchlorinate regularly could result in the growth of algae in your pool.

#### Sizes:

- 4 lbs., 8 lbs.
- 15 lbs.
- 25 lbs.
- 50 lbs.

### Compatible With:

Chlorine, ozone and mineral purifiers

### Advantage:

Tablets dissolve slowly and at a uniform rate, eliminating the need for frequent hand feeding of granular or liquid chlorine.
