

MODEL CNKLS CONNECTOR KIT
(USED WITH MODELS 2008AF or 2008RL)

3.2

Entry or Ladder

1. Make certain entry system or ladder is fully assembled and positioned above a vertical support post of the pool; securely fastened to the top rail of pool.

2. Remove the TOP bolt only, washers & nut from each of the upper handrail sets as shown in Figure 2

3. Position a connector kit end post (see 3.1) on the side of your entry system. The post fits into the square notch of the top platform of the entry (see 3.2) and in line with the top bolts of the upper handrails (see Figure 3.3). Make certain the small pilot holes drilled for the rail connecting screws face outward, away from the pool. Using a fence rail; fit rail into routed hole in post and adjust post up or down to make rail level (see 3.4). Mark location of post against entry once level. Repeat for both sides - posts

Entry or Ladder

5.1

4. With post in place & rail level, mark top bolt hole location on post where bolt was removed from handrail set (see Step 2 above). Drill a 1/4" hole directly through post at mark. Using a 5/8" drill bit, enlarge ONLY the outside 1/4" hole (furthest away from entry). Secure post in place at this location using the 2" bolt provided. Similarly, where post meets top platform of entry at indentation, drill a 5/8" hole in outside wall of post - furthest away from entry. Drill a 1/4" hole through inside face of post only and secure post to platform with # 14 x 1" screw (see 4.1). If post meets entry at hole for fence rail, drill 1/4" hole only

5. With posts securely in place, assemble fencing on both sides of entry following instructions supplied with fence. Complete assembly by securing fence rails with the #8 x 3/4" screws provided (see 5.1). Cut excess post at top if required. Make certain fence & entry are stable & secure before using - REMEMBER - SWIM SAFELY!
