

## Filter Cleanse

This multi-purpose granular formulation cleans and unclogs filters of grease, oils and scale with a combination of acids and detergents. Its unique chemistry will gradually change from red to yellow as it cleans.

### Features:

- Special solution changes color from red to yellow when filter is clean
- Multi-purpose, granular formulation cleans any type of filter (sand, cartridge or D.E. filters)

### Applications:

#### For Cartridge Filters and Removable D.E. Filter Elements:

1. Remove cartridge elements and place in suitable plastic container.
2. Cover elements with **Filter Cleanse** solution (1 lb. per 5 gal. of water).
3. Allow to soak at least 4 hours, but preferably overnight.
4. Remove element from solution, rinse thoroughly and replace in filter.

#### For Sand Filters and Non-Removable Elements:

1. Backwash filter then drain. Close drain valve.
2. Prepare **Filter Cleanse** solution (1 lb. per 5 gal. of water).
3. Add sufficient solution to cover sand (see label directions).
4. Allow to stand overnight (12 hours).
5. Backwash until backwash water runs clean.
6. Return filter to normal operation.

### Sizes:

- 2 lbs.
- 20 lbs.
- 50 lbs.

### Tips:

Use routinely once every month or two during season to maintain efficient operation. Clean filter early in the spring to remove winter debris and after a period of intense use. It's also important to clean the filter when preparing pool for winter.

### Compatible With:

Chlorine, bromine, mineral purification systems, salt water pools, ozone and biguanide sanitizers.

### Advantage:

A unique combination of acids and detergents, which removes all contaminants with one product.
