

Calcium Hardness Up

Increase water hardness to prevent foaming, equipment corrosion and scaling with **Calcium Hardness Up**.

Features:

- Helps maintain proper calcium hardness level of 150-250 ppm
- One pound of **Calcium Hardness Up** will increase the calcium hardness 10 ppm in 10,000 gallons of pool water

Applications:

Normal:

1. Determine calcium hardness level. It should be between 150-250 ppm.
2. If the level is below 150 ppm, add **Calcium Hardness Up** by distributing the product over the water surface. 1 lb. of **Calcium Hardness Up** will increase the calcium hardness 10 ppm in 10,000 gallons of water.

Sizes:

- 6 lbs.
- 15 lbs.
- 25 lbs.

Tips:

Properly balanced water will prevent the formation of scale deposits and eliminate the corrosion of metal pipes and fixtures.

Compatible With:

Chlorine, bromine, ozone, salt water pools, and biguanide sanitizers.
